

Apples iPhone kommt

Beitrag von „Thanandon“ vom 12. September 2008 um 18:43

Apple has released the iPhone 2.1 firmware which contains many bug fixes and improvements.

Update includes:

- * Decrease in call set-up failures and dropped calls
- * Significantly better battery life for most users
- * Dramatically reduced time to backup to iTunes
- * Improved email reliability, notably fetching email from POP and Exchange accounts
- * Faster installation of 3rd party applications
- * Fixed bugs causing hangs and crashes for users with lots of third party applications
- * Improved performance in text messaging
- * Faster loading and searching of contacts
- * Improved accuracy of the 3G signal strength display
- * Repeat alert up to two additional times for incoming text messages
- * Option to wipe data after ten failed passcode attempts
- * Genius playlist creation

Again, we recommend not updating your iPhone to the 2.1 firmware until the iPhone Dev-Team releases an update to PwnageTool. This may be important for those hoping for an unlock in the future.
