

Apples iPhone kommt

Beitrag von „Balrock“ vom 7. November 2009 um 20:33

[Zitat von diver2000](#)

Wenn ich den o.g. Link öffnen will, sagt mir F Secure dass es eine Schädliche Website blockt.... So wird sich mir das Geheimnis wohl nie erschließen... Wie schädlich ist denn die Seite?

Du solltest mal die Setting von deinen F-Secure überprüfen 😊
Meine Avira Premium Security Suite meckert nicht. Ist eine PDF Datei und es geht um so etwas.

Zitat

"Try more software from us: Perfect Keylogger for Mac - the first invisible Mac OS X keylogger with remote monitoring support!

Searching for a stealth parental control or employee monitoring software for Mac? Perfect Keylogger for Mac is what you need. This is the only Mac keylogger offering so complete set of monitoring features! It invisibly records keystrokes typed, IM chats (both ways), websites visited and makes screenshots. It also fully supports email notifications and can send all activity recorded by FTP or iDisk. This program would be useful for anyone who needs a stealth computer monitoring solution for Mac. More details are available at

Start Menu for Mac OS X (freeware by BlazingTools Software)
Start Menu is a free software for Mac OS X which provides a simplified Start Menu functionality from the Windows world. You'll be able to browse the list of all installed Applications and run what you need with a single mouse click - like you do in Windows. Click the program icon to show the menu.

Right Zoom for Mac OS X 1.63 (freeware by BlazingTools Software)
Right Zoom utility is created for people who don't like a default behaviour of green Zoom button in Mac OS X programs. This small program changes its behaviour, so a green button will always maximize your windows instead of inconvenient resizing. The program changes a behaviour of most used applications like Finder, Safari, MS Word/Excel/PowerPoint, Pages, Numbers. These applications are most annoying

examples of inconvenient zoom button behaviour. You can extend the list with your own applications. You can also use Command + Option (alt) + E keys to maximize the current active window in most applications. You can set this Zoom button behaviour for all applications, just edit program options. The program wasn't tested in every application, so don't expect it to be ideal.

If you want to send a donation for this program, just buy any of our shareware tools (starting from \$10) at <http://www.blazingtools.com>"
