

Standheizung freischalten bei 4 Zonen Klima

Beitrag von „tthom“ vom 5. Januar 2012 um 11:35

one more cool tweak found - some 3.0 TDI Tregs3 are equipped with Eberspecher auxiliary heater even if this option isn't ordered. it might be checked via VAGcom, if module 18 is present - thats it. Other way is to look for a sticker on a plate, when drivers door is opened (dont know how to explain it in correct words). the sticker should look like this

From factory this heater is used only after engine start, but its easy to make it work as a parking heater and activate timers menu in RNS.

1 In Hidden menu check option car/cardevicelist - Auxiliary Heater

2 set option Auxiliary Heater to 5 in car / carmenuoperation

3 set enabled bit 4 in byte 1 of 08-AutoHVAC module.

Then turn off the ignition and start once again. A menu Aux Heater should appear in Climate screen of RNS. There you could setup a day, time and duration of heating. at fixed time you should see ventilation start, and even some smoke under the car

Hab das hier im Netz gefunden!

Den Aufkleber von Eberspächer hab ich ja im rechten Türrahmen.

Kann man mit den 3 beschriebenen Punkten etwas anfangen, wenn man VCDS kennt?

Zündung aus und wieder einschalten bekomme sogar ich dann selber hin 😊

Gruß

Thomas
