

# Das Luftfahrwerk und seine Probleme

Beitrag von „m0oni“ vom 28. Mai 2017 um 14:12

Moin Moin Liebe Community,

ich habe nun auch schon viel gelesen, kann mir aber leider kein vollständiges Bild machen, aufgrund meiner anstehenden Fehler:

Was ist passiert?

Diverse Fehlermeldungen im Speicher, Absenkung des Fhzg vorne Links -> Fehlersuche ergab dass der Luftbalg defekt ist. Ergo neuer Balg eingebaut (online vom A-S-S erworben).

Was passiert nun?

Fhzg lässt sich in alle Niveaus bringen, Sport, Normal, Comfort, Gelände und ULTRA Gelände

Fhzg lässt sich NICHT in den Lademodus bringen -> Kompressor lädt und lädt und lädt und lädt ... a never ending Story

Start des Fhzgs nach kurzer Zeit Fehlermeldung im Display (Orange meldung) Fahrwerksfehler ab in die Werkstatt! Aber diese Meldung tritt auch zwischen durch ab und an nochmal auf - während der Fahrt.

Was mich wundert, dass der Kompressor meist 0Bar hat. Ich habe auch ein LiveLog gespeichert und angehängt, vielleicht bringt das Licht ins Dunkle.

Ich denke, bin aber bei weitem kein Experte, dass es hier Probleme mit dem Druckverlust gibt oder sogar der Kompressor hin ist (wer weiß wie lange der Balg defekt war und es immer gegen gearbeitet wurde).

Was meint ihr?

THX a Lot!

Rene

## Fehlerspeicher:

Zitat

Adresse 34: Niveauregelung Labeldatei: DRV\7Lx-907-553-34.clb
