Bericht zum Porsche Cayenne III

<http://www.autoguide.com/manufacturer/p...t-9.com20171030>

Sehr viel Lob. Es gibt neue Assistenten..

"The new Cayenne makes a big step forward in terms of connectivity. Along with a new app that allows drivers to do a variety of useful things like check up on their car's status or even mark down where they parked it, the Cayenne is now available with an LTE internet connection. That allows it to get real-time traffic and weather updates, and enables the car to act as a mobile wifi hotspot. Apple CarPlay (no Android Auto), four USB ports, a giant panoramic sunroof, and Nest smart home connectivity are just a few features on a ridiculously long list. Of course, all the latest safety and driver assistance features are available, including adaptive cruise control with traffic jam assist, collision mitigation with active emergency braking (it even closes the windows and turns on the hazard lights if a crash is imminent and the driver isn't responding), pedestrian detection, active lane-keep assist with traffic-sign recognition, lane-change assist, and night-vision assist with thermal imaging."
