Dear Stef.

I did no chiptuning till now, but this is still a option.

Currently I am waiting for the demo car which my dealer has ordered and which should be delivered at the end of this month. He will do this tuning first and my decision will be made after that - but I'm pretty sure it will be the way to do.

The most worst thing is the missing power between 1500 and 2000 rpm. Its a mess. It's not the same quality style as the rest of the car. EUR 1000 are enough for 500 NM and aprox. 155 kW.

Another thing for not recommend if you are driving so much. The software of the build in Navi system is just bullshit and not the money woth. Buy another DVD based as accessory and you will be mor happy.

If you are a taller then the average, the seats are not recommendable. Buy the standard seats and replace the driver seat by a Recaro Orthopaed.

Both saves money and brings more fun.
