

Paddle shift installation

Beitrag von „spockcat“ vom 23. März 2005 um 02:27

I am attempting to add the paddle shift option in my Touareg. We don't get this option in North America. I've installed the paddles and the wiring to the transmission controller but the paddles are not working. I suspect that there is some module coding required to enable them. I need the code readouts from someone who already has the paddle shifters in his Touareg. Can anyone help?

Thanks to Theresias, I was able to get the correct coding and make the paddle shifters function. According to the price list this was a 780 Euro option in 2004. This can be done for about 1/3rd that cost.
